- | | | |
|--------------|--------------|------------|
| ① a. ready | b. recognize | c. measure |
| ② a. spends | b. collects | c. costs |
| ③ a. perfect | b. less than | c. manual |

D. Read the following passages and write the correct answers.

[12~13]

A whale in the ocean can't be measured easily. Scientists need to find creative ways to get this information. For whales, scientists usually start by studying dead animals. Sometimes, the bodies of dead animals wash up on beaches. ① (these / Scientists / do / animals. / manual measurements of) Then, scientists can figure out the average proportions of a whale. They can use this information to study living animals.

12. What do animals measure to help them study living animals?

13. Unscramble sentence ①.

[14~15]

In 1988, NASA sent a spaceship to Mars on a mission. They wanted to measure the climate. Unfortunately, something wasn't perfect. NASA uses metric measurements. But one of the companies NASA worked with did not. The program that told the ship how high to move around Mars was written in imperial units. This meant the ship moved too low in space. The ship crashed on September 23, 1999, and the mission was lost. From 2007, NASA decided to use metric measurements only.

14. Why did the spaceship crash?

15. What did NASA decide to do after the crash?
