Date: Oct 15

Subject: Trina Court

Hi Miss Smith,

I'm just writing to thank you for your help with my daughter, Trina Court. At the beginning of the school year, she was having a lot of trouble keeping up with the material in your class. But she told me that you changed some of your teaching methods to appeal more to tactile learners like Trina. Since then, her grades have improved a lot, and she is much happier when she goes to school in the morning.

Do you have any tips about how I can help her study better at home?

Thanks again,

Alan Court (Trina's dad)

Subject: re: Trina Court

Hi Mr. Court,

Thank you for your email. I really appreciate hearing from my students' parents. I've really noticed the improvement in Trina, too. I'm glad I could help her.

As far as tips for home study go, I recommend encouraging Trina to draw pictures, make posters, and build models based on the lessons from school. Let her move around while she studies and give her lots of high-5s for encouragement.

If you have any other questions, feel free to email me or drop by the school to talk face-to-face. I'm available to meet weekday afternoons from 4 to 5.

Sincerely,

Simone Smith

34. Why does Alan Court write to Simone Smith?

- a. To complain
- b. To show appreciation
- c. To clarify some information
- d. To change an appointment

35. What was Trina's problem at the start of the school year?

- a. She thought Miss Smith's class was boring.
- b. She thought Miss Smith's class was too easy.
- c. She thought Miss Smith's class was too difficult.
- d. She was bullied by other students in Miss Smith's class.

36. What advice does Miss Smith NOT give to her student's father?

- a. Encourage Trina
- b. Build things
- c. Draw pictures
- d. Use flashcards

37. When might Alan Court go to see Miss Smith?

- a. Saturday at 4:20 pm
- b. Tuesday at 4:45 am
- c. Wednesday at 2:30 pm
- d. Friday at 4:30 pm

#### Research Identifies Two New Blood Types

Scientists have discovered two new blood types. This could potentially save thousands of lives each year. These new blood types, called Langereis and Junior, have their own unique antigens to protect the body from harmful bacteria. Organ transplants and blood transfusions can be dangerous for people with these blood types. In addition, the antigens in these types of blood seem to make cancer medicine less effective.

Although these types are rare, they are more common among certain Asian populations. Doctors are confident that new tests will make identifying patients with Langereis and Junior blood types faster and easier. Furthermore, by learning more about the proteins in these types of blood, they hope to be able to create more effective cancer medicine for people of all blood types.

38. According to the article, why is the discovery important?

- a. It can reduce the need for organ transplants.
- b. It can help to make better medicine.
- c. It can create more antigens.
- d. It can help doctors to save money.

39. What group of people might be helped by this discovery?

- a. Doctors
- b. Asians
- c. Juniors
- d. Scientists

40. Where would this article most likely appear?

- a. An Asian travel magazine
- b. A home and garden magazine
- c. A building plan for a new hospital
- d. A medical journal
